

Tressel™

If you are looking for process automation opportunities, the Order Fulfillment process is often a good place to start. It is a complex process with a number of sub-processes (receipt, acceptance, confirmation, manufacturing, packaging and shipping), multiple documents (advanced shipping notices, bills of lading, proforma invoices, packing slips, and shipping labels), and lots of data to track and reconcile (units ordered versus units built versus units packed versus units shipped versus units installed versus units invoiced). Streamlining and automating portions of this process can provide significant paybacks, both in terms of cost savings and customer satisfaction.

Solving Real-Life Problems

That was the inspiration behind Tressel™, our barcoding and shipping tool. It was developed in partnership with one of our customers, a major automotive manufacturer, to help them manage interactions with their suppliers. This tool makes it easier to package parts for shipment, improves the accuracy of the shipping data and simplifies the process of generating shipping documents.

Flexible Workflow

Tressel™ is a shipping software. It's customizable, so you can determine which process steps to automate and then build the workflow to manage those steps. This flexibility is one of the major advantages of using Tressel™. This tool doesn't force users to conform to someone else's standard process; it allows them to define a process consistent with their own way of working. This makes it much easier to adopt the new tool and shortens the time it takes to begin realizing the benefits.

Key Features

Tressel™ allows you to create and maintain data about each of your customers, including their ship-

Tressel™ Features & Benefits

- Flexible workflow conforms to fit the way your company works today
- Stores customer data (ship-to locations, crate and pallet set-ups, customer-assigned product IDs) for use in future shipments
- Supports both Lot Tracking and Serialization for traceability
- Integrates with business systems to provide process updates
- "Scan to build" speeds packing process
- Generates all required documents (ASNs, bills of lading, packing lists, proforma invoices, shipping labels)
- Workflow conforms to your process, making it easy for your employees to adopt the new software
- "Scan to build" improves the accuracy and speeds the packing of customer shipments
- Product ID cross-referencing makes the experience better for your customers because products are shipped using their custom product IDs
- Lot Tracking and Serialization make it easy to find end customers for product recalls

to locations and specific crate and pallet configurations. It also helps you work with customers who assign their own product IDs to your products, by providing a cross-reference table that maps your product ID with theirs.

Another important feature is “scan-to-build,” which dramatically improves the process of packaging products for shipment. It allows orders to be built in real-time by scanning the serialized tags from the items that are being packed. You can add multiple pallets and assign containers to those pallets. Once this order is saved on the scanner software, the information is sent to Tressel so the order can be completed and sent through EDI.

Tressel™ supports both Lot Tracking and Serialization, so that you can trace the movements of your products and identify the end customer in the event of a quality issue or recall.

Tressel™ can use demand information from your ERP system to determine which orders are ready to pack, which products and quantities to include and where those products are to be shipped.

The system generates all of the required documentation (advanced shipment notifications, bills of lading, packing lists, shipping labels, etc.).

Learn More

Tressel provides all the flexibility you need to manage your shipping needs. Let us show how this tool will allow you to “get Automated.”

About Acclimate

Acclimate specializes in helping companies get integrated, get automated and get empowered.

Our SimpliCIT™ Electronic “Data Interchange (EDI) software and ANC™ Value-Added Network platform combine rules-based integrations with fast and reliable data transfer to provide seamless communication across your value-chain.

Our Process Automation and Custom Development services eliminate bottlenecks and redundancies in your processes, capture the data needed to effectively manage them, and deliver automated solutions optimized for throughput and quality.

Our Empowerment solutions transform your data into actionable information that enables you to manage your processes effectively and empowers your employees to make real-time decisions.

If you would like to know more, contact us at (937) 684-9004 or visit our website at www.acclimate.com. We welcome the opportunity to help you get Acclimated.
